

UAS REAL ESTATE SHOTLIST

Safety First!! As the Pilot/Photographer you are responsible for conducting operations legally and safely. Do not fly in a manner that compromises the legality or safety of the operation, regardless of whether or not you are able to fully complete the mission. Skip shots that compromise legality/safety.

Shot Numbers **1-27** should show each full building side, **corner to corner without being chopped off**, if at all possible. Additional shots can show all or part of a building side as per Pilot's taste.

For Ground-Based imagery, the Building should fill most of each image frame, leaving a little space on both sides.

****REMEMBER** – Shots 12-27 should include the SKY STRIP at the top of the picture!! If you have any questions at all on what that means, refer to the Pilot Center page, www.uasllc.us/pilots, and look at the example picture for Shot #21, or call us.**

Pre-Shoot QUALITY Checklist
